

## AMENDMENT(S) TO THE CLAIMS

1-31. (Canceled)

2 32. (Original) An inkjet printhead cartridge comprising a container of ink, an area  
4 having orifices through which ink is ejected from said container during printing, a reservoir  
of printhead servicing fluid matched for use with said ink and an applicator for applying a  
reproducible quantity of said servicing fluid onto a printhead wiper which wipes said orifices  
during relative movement of said printhead and wiper.

2 33. (Original) The cartridge of Claim 32, wherein said servicing fluid is  
impregnated in a porous material filling said reservoir.

2 34. (Original) The cartridge of Claim 33, wherein said applicator comprises a wick  
in fluid communication with said porous material, said wick having a fluid dispensing surface  
positioned for applying said fluid to a wiper which subsequently wipes said orifices.

2 35. (Original) The cartridge of Claim 34, wherein said wick has substantially  
greater capillary attraction force than said porous material.

2 36. (Original) The cartridge of Claim 35, wherein said porous material is an open  
cell rigid foam block.

37. (Original) The cartridge of Claim 34, wherein said cartridge is refillable.

38. (Original) The cartridge of Claim 34, wherein said cartridge is disposable.

39-45. (Canceled)

2 46. (Original) A method of servicing an inkjet printhead comprising applying a  
reproducible quantity of servicing fluid to said printhead by causing mutual movement of said

4 printhead and a resilient fluid applicator and wiping said printhead to remove said fluid from  
said printhead.

2 47. (Original) The method of Claim 46, comprising moving said printhead to  
engage said applicator.

2 48. (Original) The method of Claim 47, comprising engaging a flexible applicator  
by contact with said printhead to release said fluid onto said printhead.

2 49. (Original) The method of Claim 47, comprising moving a flexible applicator  
by contact with said printhead to cause said applicator to apply said fluid onto a wiper and  
moving said printhead with respect to said wiper to wipe said printhead.

50-51. (Canceled)
